DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claim, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claim 1 which include an image forming lens with only three lens components, in order from the object side, a stop, first lens component having a positive refractive power with an object side surface being convex in the central area and a convex image side surface; a second lens component having a negative refractive power with an object side surface being concave in the central area and a convex image side surface; a third lens component having a positive refractive power with an object side surface being convex in the central area and an image side surface that is concave in the central area and becomes convex at the

periphery; where all three object-side lens surfaces and all three image-side lens surfaces of the three lens components are aspheric.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sato (US 6,747,810) and Sato et al (US 6,728,047) are both cited to show other imaging lens systems having only three lens components with some similar structure and aspheric surfaces, but do not teach where all three object-side lens surfaces and all three image-side lens surfaces of the three lens components are aspheric.
